

# How to Create a Project using the Make a Map Feature

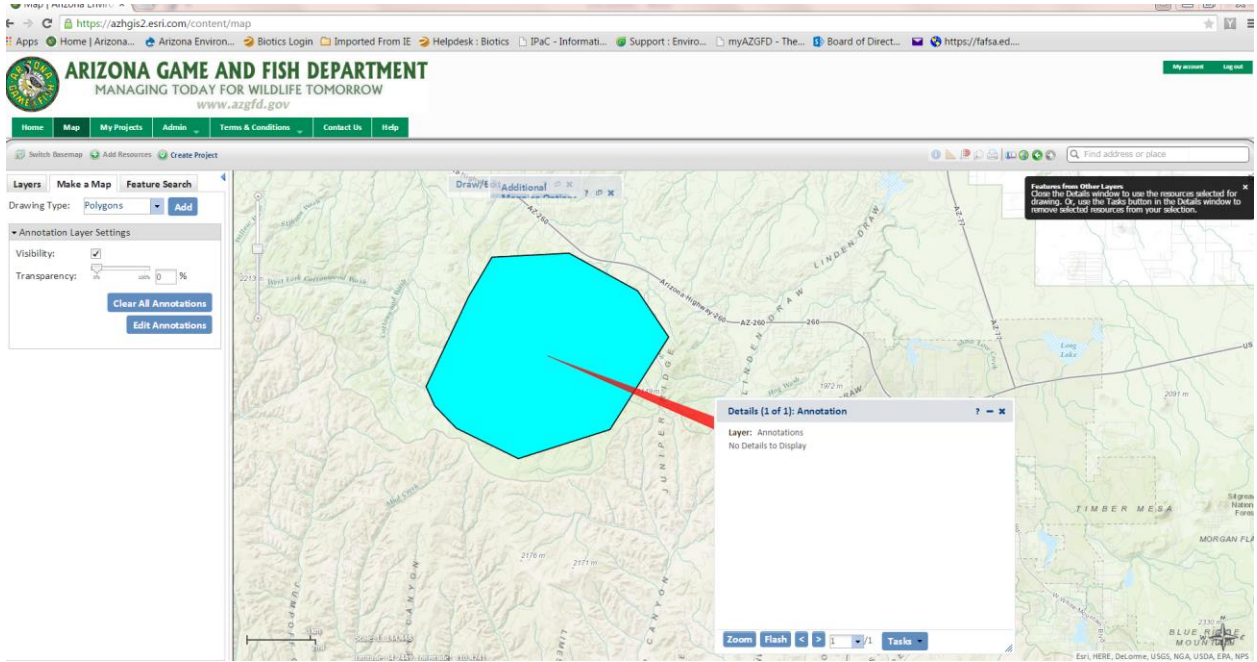

Use Make a Map Tab to draw your polygon – at any scale. You can add annotations and multiple shapes.

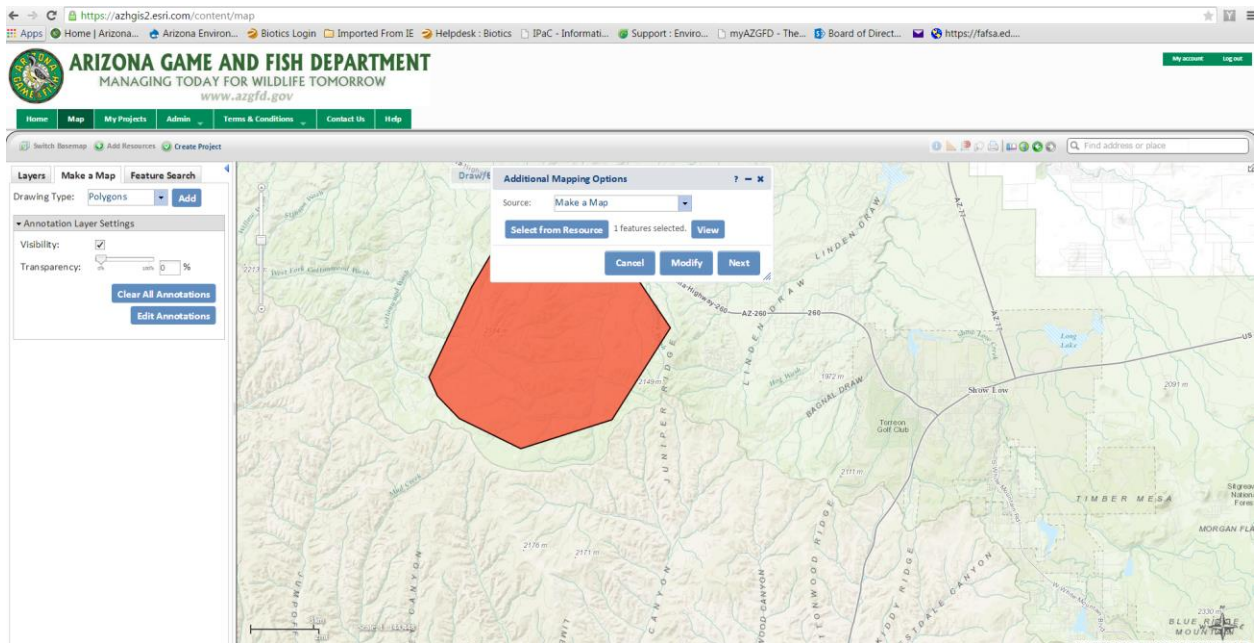

Click the Create Project button, which will open a dialog box. Click yes

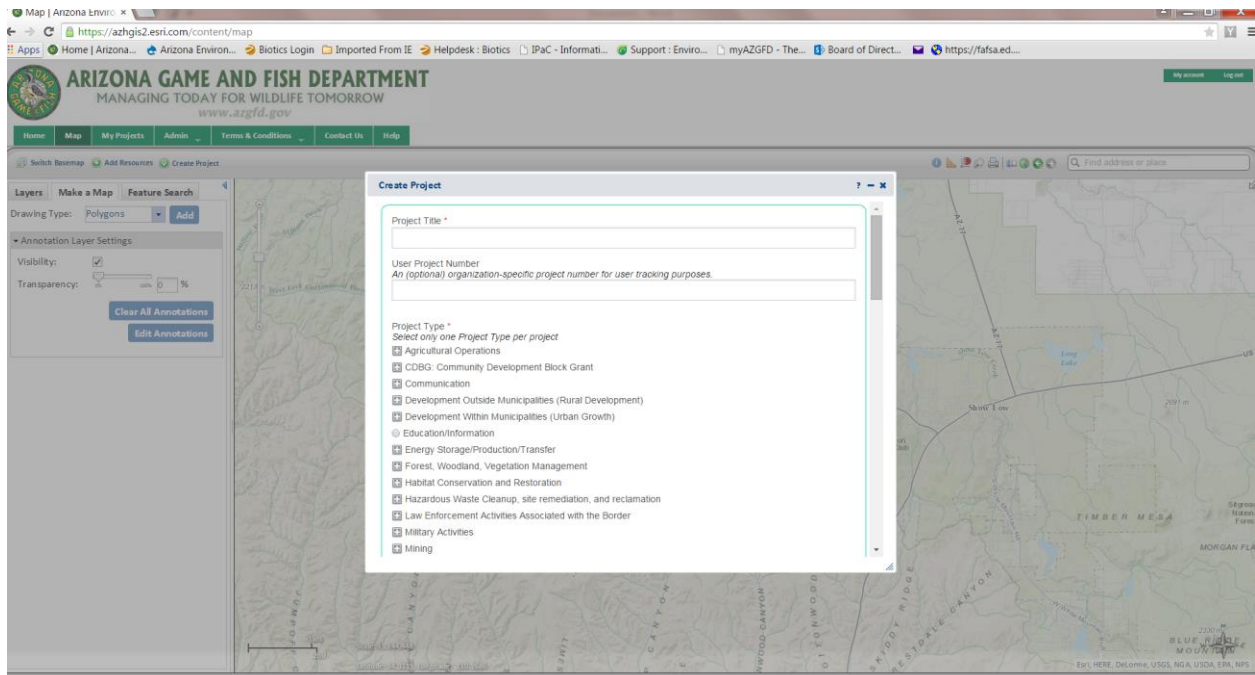

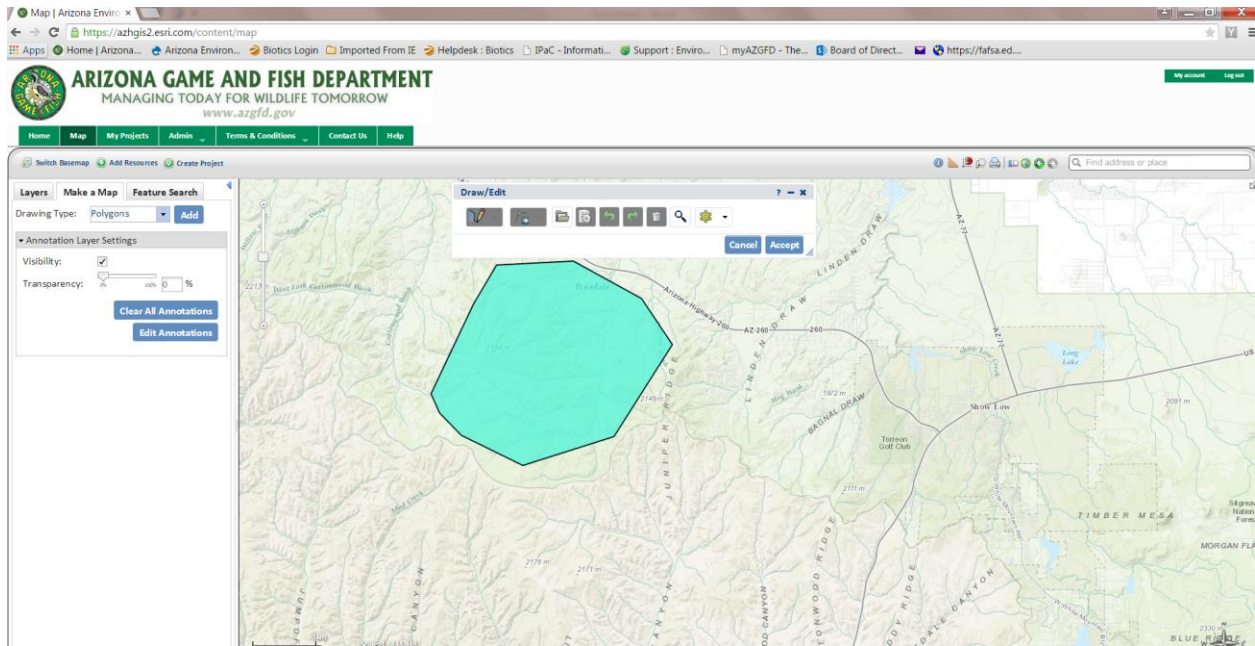

Allows you to pick all or some of features you added. If you only have one and want to use it, then close the Details box and it will open the next box.

This next dialog box allows you to add additional shapes from reference layers or other means. If you just want to use the single feature, click next.

Click accept to get the project type dialog box and you will be done.

Finish completing the project description and submit at the end.
